

System Solutions

for high-temperature applications

| CVD high-temperature coating

From the idea to the finished component.

Lightweight. Stable. Temperature resistant.

Graphite Materials recognizes the tremendous potential of the element carbon. And enthusiastically gets it into shape.

It's up to you to decide what shape this will be. We are driven by your individual needs. These give us direction and point the way to the best solution for you with maximum benefit for your application.

Each of our employees is totally committed to this. From the initial idea to the finished component. From the dimensionally-stable CFC fixtures to the customized heating system. From piece production to large-scale manufacture. Quality in every fiber.

This begins with the use of materials that have undergone exhaustive testing, includes a precise design and culminates in effective manufacture according to the highest quality standards. Everything under one roof – everything from one stop. Always listening to you and taking your requirements into account. True to our guiding principle: we are only satisfied when you are.

This is the standard by which we are measured.

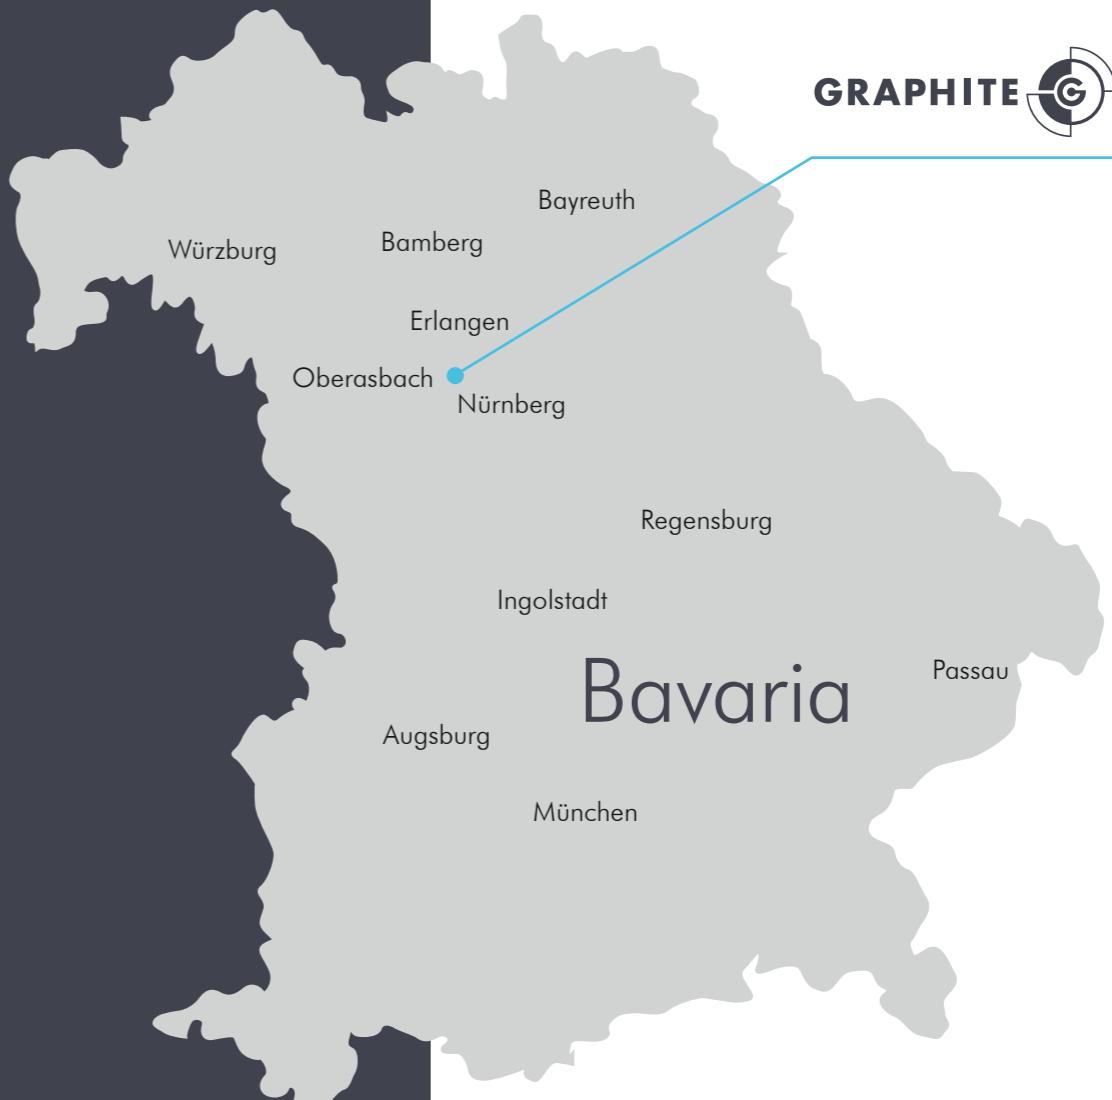

Kind regards, Dr.-Ing. Rolf Terjung

GRAPHITE **MATERIALS**

Your partner for the best that
carbon has to offer.**

GRAPHITE **MATERIALS**

Bavaria

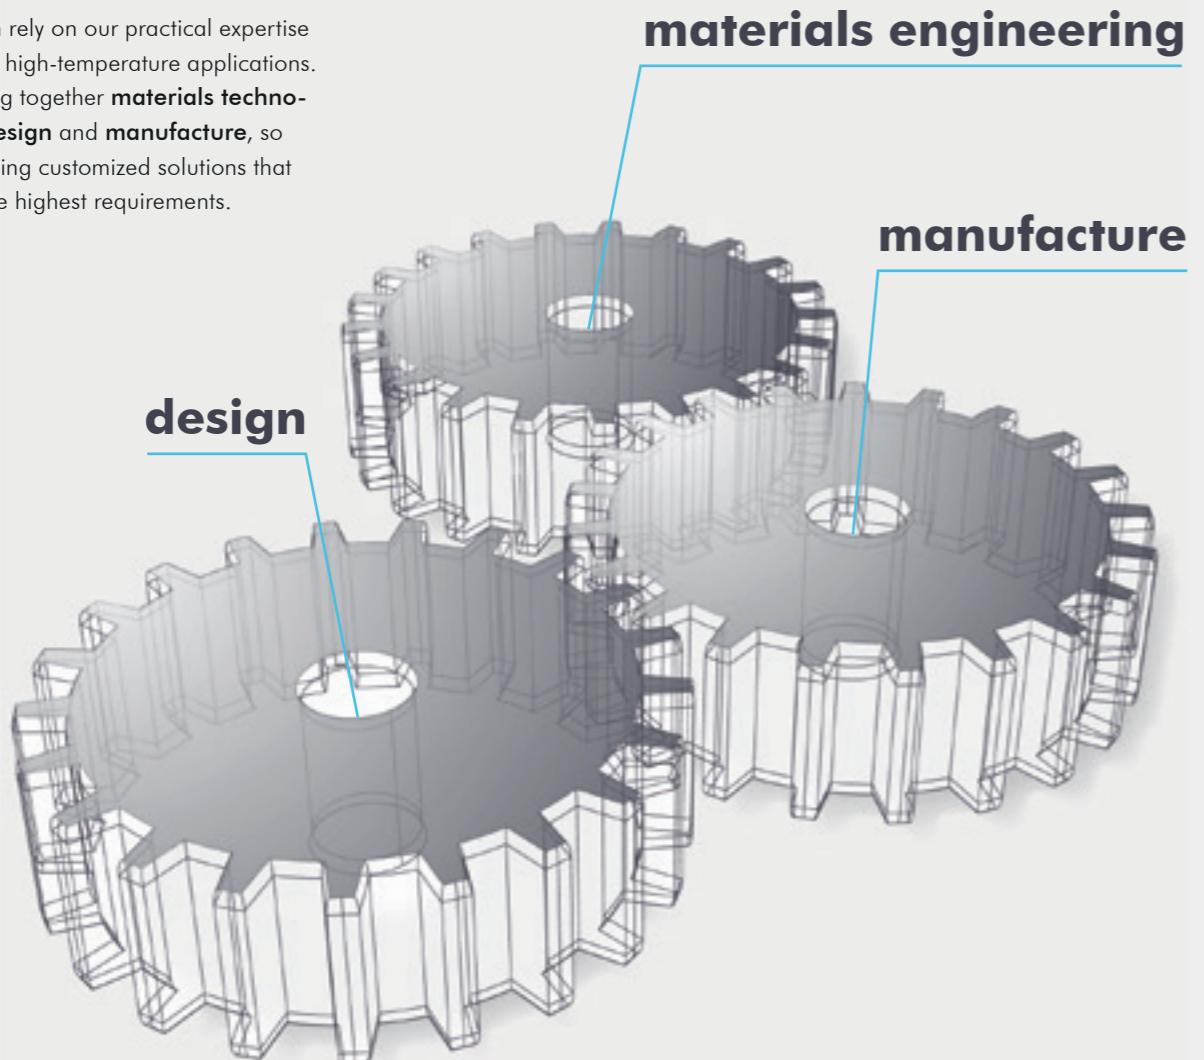

**In the heart of the metropolitan region of
Nuremberg:**

- 3000 m² production area
- 30 employees
- Founded in 2000
- Owner-managed, independent company
- LEAN production management
- Sustainable environmental management ISO 14001:2015
- QM system 9001:2015
- Training is the future

Divisions

Lots of questions, one solution: Graphite Materials.

You can rely on our practical expertise for your high-temperature applications. We bring together **materials technology, design and manufacture**, so developing customized solutions that meet the highest requirements.

**Good ideas.
Optimum components.**

Creative partner for high-temperature applications

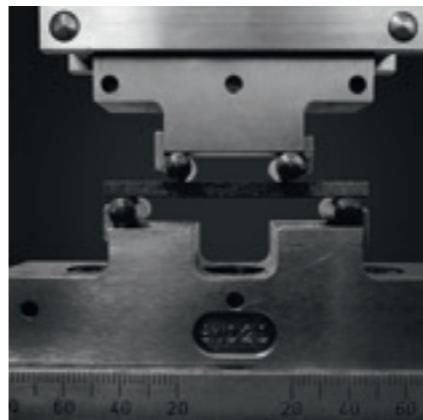

Graphite Materials is your equal partner for high-temperature applications in the range from 1000 degrees Celsius. We manufacture high-quality components from graphite and CFC, which are used in systems in a wide variety of different industries. From the robust special screw in series production to the complex CFC cylinder in piece production.

Our work is always centered on your individual requirements. Our employees include you in the planning and manufacturing process from the start and translate your wishes into tangible solutions. Creativity meets quality. In materials engineering, design and manufacture.

Materials engineering

No compromises: We only use the best materials in our products. Our materials engineering specialists measure and analyze, simulate and experiment.

Manufacture

Spot-on solutions: Each of your wishes encourages our creative lateral thinkers to new heights. We offer you modern and effective solutions. Transparent and practical.

Putting designs through their paces: Our manufacture is not just an extended workbench mindlessly producing one piece after another. It is the heart of Graphite Materials, kept in sync by skilled workers who use their initiative, always with a focus on customer benefit.

**Good ideas.
Optimum components.**

**Working hand
in hand. For
your solution.**

**YOUR ORDER –
OUR SOLUTION**

CVD high-temperature coating

Robust. Reliable. Efficient.
High-tech finishes for your products.

Give your products additional functions with CVD coatings. Graphite Materials supports you with customized graphite, CFC and insulation components for your coating system.

CVD stands for **chemical vapor deposition**. This is an effective process for coating components via a thermally induced chemical reaction. In simple terms: Gas in a coating system flows around your components and gets into even the smallest of contours. At temperatures of about 1000 °C, a thin and uniform protective layer comprising nitrides, carbides, borides and oxides is applied.

Technical edge thanks to CVD

CVD coatings offer outstanding adhesion, even under extreme operating conditions. This results in homogeneous components without weak spots.

Create a technical edge with a CVD coating and improve the quality of your products. Graphite Materials produces high-quality, customized components for your coating system. We rely on tried-and-tested graphite, CFC and insulation materials that we process with precision.

Why CFC for the CVD coating?

Space costs money. Also in CVD coating. This is why Graphite Materials offers you extremely slim workpiece fixtures made of CFC (carbon fiber carbon composite). They are less than half the thickness of graphite plates and yet carry the same weight of components. For example, a four-millimeter-thick CFC plate has the same load-bearing capacity as a ten-millimeter-thick graphite plate. So you can increase the number of charging levels in your system and coat many more components in a process cycle. The advantage of CFC rings and plates over graphite is that they can also be de-coated, re-used and re-coated. This saves material, energy and, in turn, also costs.

Advantages of CFC rings and plates for the coating:

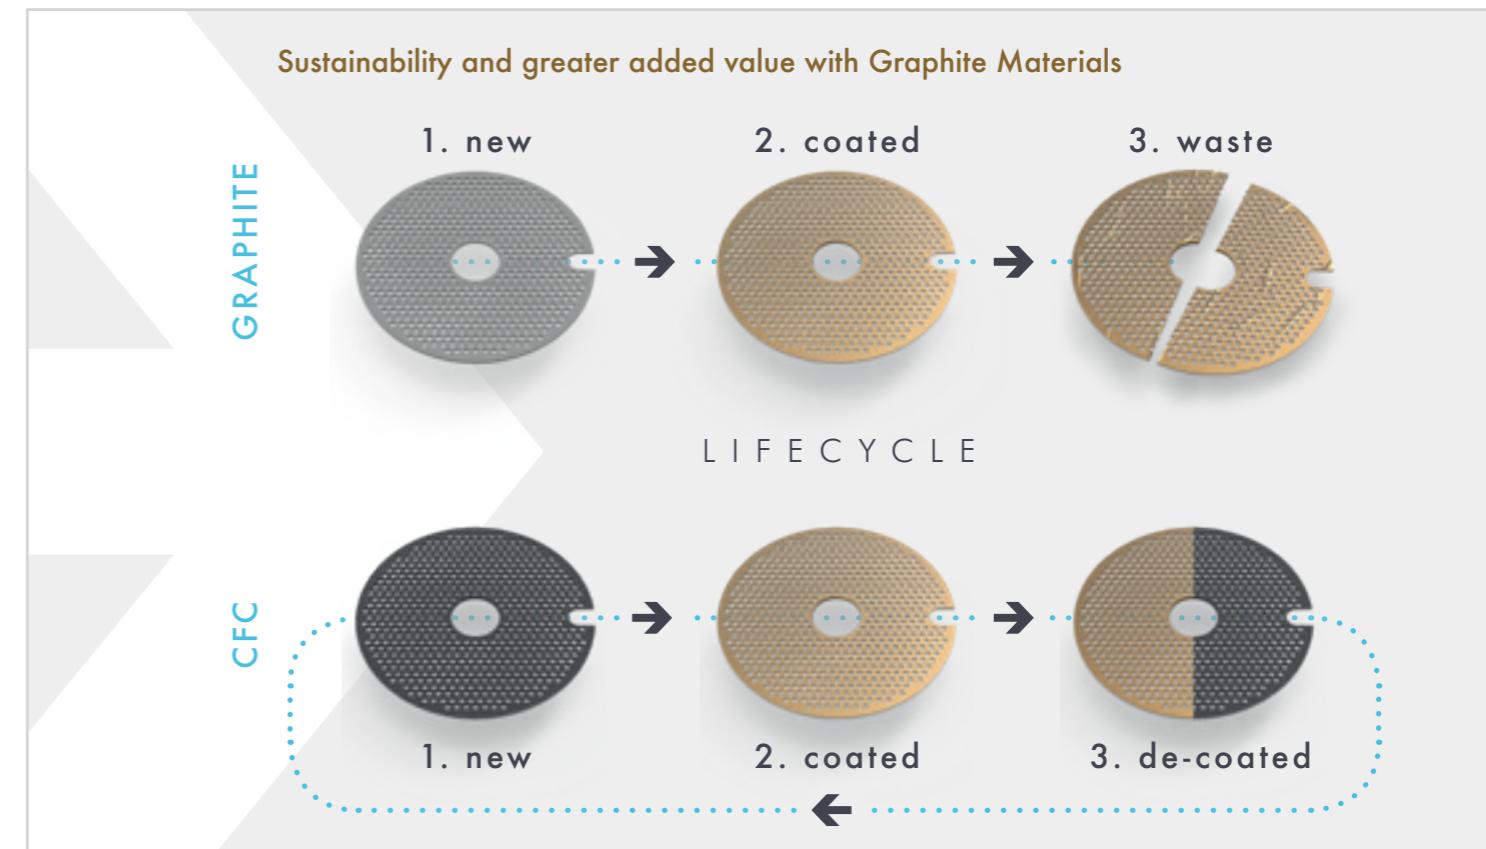

- + Higher added value with each coating cycle
- + Lower consumption of resources (material, energy) for operating resources
- + Lower costs
- + Low expansion (minimizes the risk of flaking)
- + High dimensional stability
- + High load-bearing capacity

**ONE RAW MATERIAL
– VARIOUS OPTIONS**

QUALITY MEANS MORE

from the
idea
to the finished
component

1.

Consultation

Always at your service: Your personal contact at Graphite Materials will be pleased to hear from you. We take the time to give you comprehensive, individual and transparent advice. With our modern ERP system, we control all business processes to ensure they are perfectly aligned. In this way, we ensure that your orders are processed quickly and economically.

2.

Materials engineering

Experienced and inquiring: Which material is suitable for your application? What are the strengths and weaknesses of the different materials? We help you to choose the best material for your application. This results in tested material combinations, such as our DuComGrid® for high-temperature applications.

3.

Design

Resourceful: We have pragmatic ideas for designing products that function perfectly in everyday use. Visual models at the design stage give you an idea of how your finished product will actually look. We are passionate about finding the best solution and creating customized products for your application area. Cost-aware, with state-of-the-art technology and optimum benefit.

4.

Manufacture

Modern and motivated: Manufacture at Graphite Materials is characterized by state-of-the-art CNC machines, high-quality tools and a committed team. Thanks to flat hierarchies and little red tape, we respond quickly and flexibly to your requirements. Our employees continue to expand their knowledge. Graphite Materials brings together vertical integration and an extensive range of services with professional and effective lean production management.

5.

Logistics

Intelligent packaging: Our Logistics department no longer dispatches our products in cardboard boxes with polystyrene fillers but in robust wooden crates. These are easier to stack and store and protect against light, dirt and moisture. The lids of the crates are screwed down rather than nailed. This makes them easy to open and, if necessary, re-close. Damage caused by crowbars and similar implements is a thing of the past.

6.

After-sales service

Service-oriented: As part of our after-sales service, we continue to talk to you about a product's performance. Are you satisfied with it? Do you need support? Is there now an effective enhancement for your product? We'll also be happy to support you by visiting you on site, for example, for training, inspections and servicing. Thanks to online documentation, we respond quickly when you need a specific replacement part.

Graphite Materials thinks ahead. As a system supplier, we not only offer you inspiring ideas but also clear added value – at every stage of our collaboration:

ENVIRON- MENTAL PROTECTION MEANS MORE

Sustainability is apparent in the materials used, efficient processes and manufactured or traded products. We set high standards and have developed our own environmental management system based on LEAN principles. In September 2017, we were certified in accordance with the requirements of the international standard ISO 14001:2015.

Save energy,
reduce waste,
preserve reusable materials.

Sustainability is more than just a catchword.

There's no question about it: Like all industrial companies, Graphite Materials consumes resources such as electricity, water and packaging materials. To minimize their use as much as possible, we have implemented a comprehensive environmental management system. In this way, we achieve optimum results – in this case, for the benefit of our environment.

As part of our environmental management system, we continue to document the impact of our actions on the environment and take immediate action when problems occur. Our employees make it a personal concern to use resources consciously and economically, to reduce waste and to preserve reusable materials.

For example, Graphite Materials uses recyclable packaging materials to transport its products. These include corn packing chips, paper buffering material and filling made from recycled card. Polystyrene has been reduced to a minimum. Fragile parts are delivered to you in wooden crates. This not only spares the environment, but it also saves time and nerves when unpacking. It also provides optimum protection for the components transported.

Further measures currently include:

- Light sensors for our lighting system
- Energy-saving, ceiling-mounted radiant heaters as hall heating system
- Use of process heat and thus reduction in consumption of natural gas
- 100 percent use of green energy
- Advising customers on energy-saving measures with vacuum and inert-gas furnaces

Our current environmental policy is available to download in PDF format from www.graphite-materials.com/gm-umwelt-leitlinien.pdf.
